

Business Intelligence for Sage

Why Panintelligence for Sage?

Transform reporting within Sage 200 and Sage CRM.

Panintelligence provides a top down view of your Sage data, via a real-time customisable dashboard. All data fields in your Sage 200 environment are available, including additions, CRM and user defined fields.

As well as making all of your Sage data visible, it will directly connect to any database in your business. This doesn't require any movement of your data or additional servers.

The Panintelligence dashboard comes with prebuilt Sage 200 and Sage CRM data connections and a standard set of charts. The software is extremely intuitive and it allows users to create additional charts with only a few mouse clicks. As a web browser based solution it can be accessed anywhere and at any time.

The real-time charts are interactive allowing you to drill down and access the underlying data. There are a number of ways to share information, such as emailing charts and pasting it into Excel.

The dashboard can track KPIs and it will send out automated alerts via email, but scheduled reports can also be distributed to dashboard users and external stakeholders making sure everyone is always up to date.

Different access privileges built into the dashboard ensure sensitive data is only visible to authorised users, allowing you to effectively monitor individual, team and corporate goals.

With the ability to connect to any database, in addition to your Sage 200 and CRM on premise data, Panintelligence creates a top down view of all areas of your business.

What is Panintelligence?

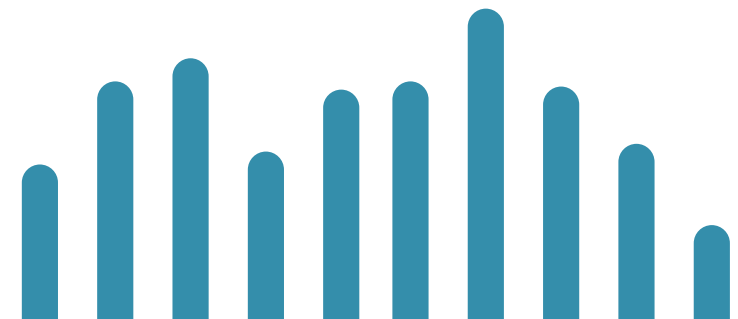

Developer

"Panintelligence is an excellent product to work with both from an administration and user level. The support provided is first rate as is the technical expertise of the employees."

Alan Radford, IT Systems Manager,
Schluter Systems Ltd

Sage Innovation Award

Winner 2014

Sage ISV Partner of the Year

Finalist 2014

“Panintelligence have worked with us over the past few months to provide a complete dashboard / reporting structure for our Sage 200 accounts and CRM systems.

Having considered a number of options we settled on Panintelligence due to their excellent technical knowledge and clarity of exactly what they could and could not deliver.

During the negotiation and configuration stage they remained open and available to us at all points and delivered concise information at each stage in the process. They delivered the project to the agreed timescale and within budget.”
